2026-06-25 17:25 UTC · CYBER3 Scan · Descoperire autonoma + Vulnerabilitati + MATCH amenintari

1 · CYBER3 Scan Autonomous Network Discovery

Aici sta diferentiatorul CYBER3 Scan. Nu a primit NIMIC — nicio clasa de IP, nicio lista de VLAN-uri, nicio harta de retea, niciun agent pe vreun echipament al clientului. Stand inline pe senzor, a cartografiat singur intreaga retea a clientului.

Intr-o singura trecere autonoma a descoperit 254 gazde active in 13 VLAN-uri si 33 subretele; 214 au raspuns cu MAC-ul hardware real; au fost identificati 222 producatori distincti si 200 roluri de echipament; 18 hostname-uri recuperate. Niciun alt scanner de vulnerabilitati nu face asta fara sa i se spuna intai reteaua.

Echipamente descoperite, pe tip

Linux/SSH		86
-		54
Windows (SMB)		31
echipament rețea		28
imprimant (RAW)		24
PC/laptop		7
DNS server		6
imprimant		6
camer (RTSP)		4
probabil GATEWAY		4

... +224

Descoperirea e pasiva + activa (ARP tag-uit) + connect-scan fiabil, complet inline. Niciun agent pe gazdele clientului, niciun IP furnizat — rețeaua e cartografiata direct de pe fir.

2 · Evaluare de vulnerabilitati (VAS)

Evaluare de vulnerabilitati autorizata, non-distructiva, pe 169 gazde descoperite, profil "mediu", la 2026-06-25 17:25 UTC. 175 constatari: 10 critice, 35 mari, 11 medii, 119 mici. 0 marcate ca exploatare activ in lume (CISA KEV).

3 · MATCH alerte ↔ vulnerabilitati

MATCH-ul imbină ce ARE rețeaua (vulnerabilitati VAS) cu ce I SE INTAMPLA (alerte SOC — Suricata/Wazuh, ultimele 30 zile, 7617 alerte) după IP-ul gazdei. O gazda vulnerabila care este SI sub atac este prioritatea maxima. Corelarea se face automat pe senzorul on-premises.
